

Working brief for the meeting on the PMS and AIF website

REFERENCE	FOR	BY	DATE
MB-01R	Siddhi	Aryan Kathawale	03 September 2026

MB-01R Working brief Internal, for our alignment before the client call

03 September 2026

Where this stands

Proposal MB-01 went to Shreyam Shah on 02 August. He replied with a detailed, point-by-point response. This brief turns that reply into decisions, owners and dates so the meeting produces a plan instead of a discussion.

MONEYBEE / STATUS

01 The three facts that matter

- **He engaged with every page.** The reply corrects two pages, accepts the fee model, names the internal owners and adds four requests we had not scoped. A client who reads a proposal that closely has already decided to work with us. The question left is shape, not whether.
- **The brief grew.** MB-01 quoted a marketing site. The reply describes a marketing site plus a careers pipeline, a distributor channel, a bridge to their AWS platform and a WhatsApp path. Some of that we absorb, some needs its own number, some belongs to them.
- **The 31 August target has passed.** Nothing was late on our side. The reply landed and the decisions it needs have not been taken. We reset the date off the look and feel sign off, which is the real gate.

02 What today has to produce

Four outcomes. If we leave with these, the build starts this week.

- ✓ **An agreed answer to each of his eighteen points,** so one reply covers all of them.
- ✓ **A date with Aditi** in front of the three directions. She holds the look and feel decision and every layout task sits behind it.
- ✓ **A technical call with whoever owns the AWS platform,** to establish whether we embed a portal or build against an API. That one answer moves the number.
- ✓ **A position on scope and price,** covering what the eighty thousand still buys, what gets a separate quote, and what the AMC contains.

What we bring to the table. Three complete homepage directions are built and running, shown in section 07. On the reply itself: Two of his corrections reduce our scope: the investment banking transactions move to moneybeeadvisors.com, and the published research section cannot exist because Moneybee holds no research licence. Those reductions pay for the small additions he asked for, which keeps the price conversation honest.

The story he just handed us

The most valuable part of the reply is not the corrections. It is that Shreyam wrote the positioning himself, in four paragraphs, and it is sharper than anything a copywriter would have arrived at from outside.

04 The spine of the homepage

Micro, small and medium companies. Brick and mortar. Traditional businesses we understand. Finding multibaggers before the market has heard of them.

Specific, checkable and rare, which is what a fifty lakh investor is reading for. It replaces the generic fundamental research framing we had and gives every section below it something to prove.

- **The thesis reads as one paragraph.** If India compounds at seven to eight per cent for twenty years, the backbone is micro, small and medium companies growing thirty to forty per cent a year. Moneybee finds them and stays invested through the growth. This becomes the philosophy page opener, and because it states a position plainly it is also the paragraph an assistant quotes when asked about Indian smallcap managers.
- **The pyramid is the diagram.** Page 11 of the marketing deck, the AIF pyramid, becomes the one graphic on the philosophy page. We need the deck to build it.
- **The seventeen year record is the proof.** The strongest asset on the site, and the one with the most compliance exposure.
- **Case studies replace research reports.** A holding found early, the work that found it, what happened next. Same credibility, none of the licensing problem.

The proof, and what comes out

Two questions to settle before the track record can be published, then the two corrections that shrink the site. Both corrections are right, and both change what the remaining sections have to carry.

05 The question to ask about the track record

His sentence reads that the fund returned more than seven per cent CAGR over seventeen years, then says the absolute difference is huge. Those halves point at different claims, so settle which one before it goes near a page.

The number	Is seven per cent the CAGR itself, or the margin above a benchmark? The second reading is stronger and is what the absolute value sentence implies.
The benchmark	Nifty Smallcap 250, BSE 500 or another index. The comparison is the claim, so the index has to be named on the page.
The entity	Seventeen years predates the AIF licence and probably the PMS registration. If the record belongs to a proprietary book it cannot be presented as product performance. Worth raising ourselves, early, in front of their compliance people.
The basis	Net or gross of fees, TWRR computed, and who signs it off. SEBI performance reporting for portfolio managers is prescriptive and the site inherits those rules.

How it gets presented. A chart against the benchmark, a rolling returns table, a drawdown line and a short methodology note. Never a single large percentage in the hero. The restraint reads as confidence to this audience, and it keeps us inside the disclosure rules at the same time.

06 What the corrections remove

Out of this site

- Zandu to Emami, 2008. Sun Pharmaceuticals public issue, 1995. Both belong to the investment banking vertical and move to moneybeeadvisors.com with a cross link.
- The published research section. No SEBI research licence, and the research drives live buy and sell decisions so it would not be published even with one.
- The newsletter, for now.
- Editorial copywriting as a paid line. Shreyam writes the site himself.

What fills the gap

- The site loses its longest dated credibility proof when the 1995 and 2008 transactions leave. The seventeen year record and the case studies carry that weight instead, which is why both block.
- Design consequence: no layout that needs twelve articles to look finished. The insights section has to read well at three entries.

Every point, answered

Eighteen threads in his reply. This is the answer we take into the room and the one that goes back in writing afterwards, including the two places where his own requests pull against each other.

WHAT HE ASKED	OUR ANSWER	OWNER
01 Links to the investment banking and broking sites, top right. Three group sites in total. IN SCOPE	A group switcher in the header carrying Moneybee PMS and AIF, Moneybee Advisors and the broking site. We need the exact broking URL and the name each should carry. One question back: does the switcher go on all three sites or only ours? The other two are outside our build and somebody there has to edit them.	Us. URLs from Suprit.
02 Branding first. Search and AI assistants second. IN SCOPE	This confirms the order MB-01 already argued. For the AI half the levers are concrete: server rendered HTML so crawlers read content without running scripts, structured data, one page per factual claim written plainly, and presence in the Bing index because several assistants retrieve through it. Assistants quote the clearest public statement of a fact, so the fee and philosophy pages do this work.	Us, in the build. Not a retainer.
03 The edge is micro, small and medium brick and mortar companies. See page 11 of the marketing deck. BLOCKED	This becomes the homepage spine, see section 04. We need the deck to build the pyramid graphic. Ask for it in the meeting.	Deck from Shreyam or Suprit.
04 Seventeen year CAGR more than seven per cent, absolute difference is large. BLOCKED	Strongest asset on the site. Four questions before it can be published, set out in section 05. Presented as a benchmark chart with a methodology note, never as a hero figure.	Pournima and Suprit, with compliance.
05 Publish the investment thesis in summary. India at seven to eight per cent, MSMEs at thirty to forty. IN SCOPE	Runs as written at the top of the philosophy page, and doubles as the paragraph most likely to be quoted by an assistant, which serves point 02 at the same time.	Us. Copy is his.
06 Page 4. The Zandu and Sun Pharma transactions belong to the investment banking site. IN SCOPE	Accepted and removed. They become a cross link to moneybeeadvisors.com. A reduction in our content scope, and worth saying so when price comes up.	Us.

WHAT HE ASKED	OUR ANSWER	OWNER
07 Page 6. No research licence. Use case studies and learnings. Amplify through his LinkedIn. IN SCOPE	Accepted. The section becomes case studies and learnings, which is a compliance improvement as well as a content one. On LinkedIn, see the note below this table: point 07 and point 08 want opposite things and the meeting should settle which wins.	Us. Case studies from Shreyam.
08 Writing and newsletter both difficult now. LinkedIn traction exists but personal views stay off the website. IN SCOPE	Newsletter drops out of launch. The consequence is structural: the site has to look finished with very little content on day one, and the CMS has to make adding a case study a five minute job.	Us, in the build.
09 Fees in full as an illustration. Management, performance, hurdle, high water mark. Emphasise compliance. Works for NRI clients and LPs. IN SCOPE	Yes, and already scoped in MB-01. A plain table plus a worked example at fifty lakh and one crore, with the compliance block beside it. The NRI and LP point adds a second requirement, disclosure written for an offshore reader, which may deserve its own page.	Pournima and Suprit lead the content.
10 Aditi finalises the look and feel. BLOCKED	The gate. Three finished directions are running and waiting for her, shown in section 07. We want a session this week, forty five minutes, walked through live on a screen and not sent as links. She picks one, we lock it that day.	Aditi. Date needed today.
11 AWS platform, distributor and client access through the website, login top right, WhatsApp push and pull. NEEDS A NUMBER	Three jobs wearing one sentence. The login button is trivial and absorbed. The platform connection has two possible shapes and the difference moves the price, so it gets section 09 to itself. WhatsApp is largely theirs: the MMT and bank pattern runs on the WhatsApp Business API through an approved provider, with pre approved templates and a recorded opt in, all of which sits with their platform. Our side is opt in capture and click to chat links.	Technical call needed.
12 What is required for security. IN SCOPE	Answered in full in section 10, split into what we deliver and what stays with them. The short version: the marketing site holds no investor data, and keeping it that way is the most useful security decision available to us.	Us.

The one contradiction to resolve. Point 07 asks us to amplify his LinkedIn presence on the site. Point 08 says his personal views should not appear on the website. Three readings work: a link out to the profile, a curated set of posts he approves individually, or nothing at all. We recommend the first. It costs nothing, carries no compliance surface and still sends traffic both ways.

WHAT HE ASKED	OUR ANSWER	OWNER
13 Add ons. SEO later, he writes the copy, portal via API, factsheets already generated, portal styling and AI research later, newsletter not now. IN SCOPE	Search stays inside the build and is never an add on for this client. Editorial copywriting comes off the sheet since he writes it, though we still supply the structure and edit what arrives. Factsheets are already produced monthly, so we build upload and listing, absorbed. Portal styling and AI research stay parked at their quoted prices.	Us. Confirm the sheet.
14 Brand artwork in vector. Suprit to check the originals. BLOCKED	Worth chasing directly. There is no vector Moneybee logo anywhere public: the only sources are a small wordmark image and a favicon. If no original exists, the honest options are a short redraw quoted separately, or their designer supplying one. We do not substitute artwork of our own for their mark.	Suprit.
15 Thirty days of revision accepted. Clarify what the AMC includes. They want to retain us. NEEDS A NUMBER	He volunteered this, so we should arrive with it defined instead of promising to send it later. Full inclusions, exclusions and a proposed figure are in section 12.	Aryan and Siddhi set the price.
16 Careers. A thousand applicants per LinkedIn post. Move off Google Forms, rate applicants, integrate calendar and email so shortlisted candidates book a slot. NEEDS A NUMBER	The largest hidden item in the reply. What he describes is a small applicant tracking system, and building one from scratch would cost more than the website. Two phases. Phase one now: role pages, an application form with file upload, an automatic acknowledgement carrying a booking link, and an existing scheduling tool doing the calendar work. Phase two once we see real volume: rating and pipeline. He offered to walk us through his process. Take the offer, it is the cheapest way to scope this correctly.	Walkthrough with Shreyam.
17 A section for distributors, open to global distributors. IN SCOPE	Yes, and one of the better ideas in the reply. A distributor page and an enquiry form routed to a named owner, absorbed. A gated area holding factsheets and commission structures overlaps with section 09 and should follow it. Flag for their compliance: distributor arrangements and commission disclosure carry their own rules, and marketing to a global audience carries more.	Us. Compliance sign off theirs.
18 Connect the funnel to the CRM. IN SCOPE	Yes. Every form, being enquiry, distributor, careers and factsheet download, posts through one endpoint that writes to the CRM and sends the notification. Absorbed. The only thing in the way is a one word answer: which CRM. If there is not one yet, we recommend one in the meeting.	Name the CRM.

IN SCOPE COVERED BY THE CURRENT FEE NEEDS A NUMBER QUOTED SEPARATELY BLOCKED WAITING ON THEM

Reading the register. Twelve of the eighteen points cost nothing beyond what MB-01 already covers. Three need their own number. Four wait on something only Moneybee can hand us, and each is a five minute task on their side. Say that out loud in the meeting. It puts the schedule back in their hands without sounding like a complaint.

Three directions, built

Not mood boards. Three complete homepages running as real pages, with working motion, responsive behaviour and copy already in the Moneybee voice. Aditi can scroll all three and decide in one sitting, which is the fastest route through the only decision that blocks everything else.

07 What each one is arguing

	One. The quiet institution. IVORY, SERIF Warm off white ground, a large serif headline, editorial photography and very little movement. Carries the client tagline in the header and reads closest to an annual report. This is the direction the original brief points at: restraint as the luxury signal, type doing the work, nothing competing for attention. Strongest for a fifty lakh investor arriving cold. Weakest if they want the site to feel current.
	Two. The wide landscape. FULL BLEED, SANS Full bleed photographic hero with white type over it, a floating navigation bar and an accent button. The most immediately impressive of the three on a first scroll. It is also the furthest from the register in the brief, and the alpine photograph is a placeholder that would need replacing with something that means something to Moneybee. Best first impression. Needs the most work to stop reading as a software company.
	Three. The bright modern desk. WHITE, SPLIT HERO White ground, large sans headline split across two weights, photography held to one half of the hero, and the brand accent used on a single call to action. Lands between the other two: current without being loud, warm without being casual, and the easiest of the three to extend to eight more pages without it falling apart. Our recommendation. Best balance of world class and buildable.

How to run the session. Live on a screen, scrolled, not sent as three links. Motion and responsive behaviour are half of what separates them and neither survives a screenshot. Ask her to pick a direction, not to critique details. Detail comes after the direction is locked, and mixing the two turns a forty five minute decision into three weeks.

08 What changes in whichever direction wins

The three pages were built before his reply arrived. Six things change in all of them, and saying so up front stops Aditi reading a placeholder as a proposal.

Navigation	Every direction currently carries a Research item. That word cannot appear, because Moneybee holds no research licence. It becomes Case studies or Insights. The header also gains the group switcher from point 01 and the investor login from point 11.
Photography	All three run on placeholder stock. The brief asks for original photography of the office, the team and real research materials, and this audience notices the difference immediately. Worth booking a half day shoot. It is a separate decision from the layout direction and should not delay the layout decision.
The pyramid	None of them have a home for it yet because we have not seen page 11. It becomes the single graphic on the philosophy page once the deck arrives.
The track record	No direction currently shows performance, because the numbers and their basis are still open. A benchmark chart and methodology block gets designed into the winner once section 05 is settled.
Two new sections	Careers and distributors did not exist in MB-01 and now need places in the information architecture and the footer.
Leftovers	Direction two still carries Pricing, What's New and Help in its navigation from the reference it was built against. Those go. Mentioning it before Aditi spots it is better than the reverse.
What does not change. The palette is already set from their real brand colours, being ink, the orange accent, white and grey, with the accent held to buttons, badges and hovers, never on large fields. That work carries into whichever direction is chosen and does not need revisiting.	

Two answers, one call

Point 11 is the largest unknown in the reply and the one that moves the number most. Everything turns on what their AWS team has actually built, and there are only two possibilities. We should not quote before we know which.

09 The platform question has two answers

Point 11 is the single largest unknown in the reply and the one that moves the number most. Everything depends on what their AWS team has actually built, and there are only two possibilities. We should not quote before we know which.

Path A. It is already a web application.

If their platform ships its own screens that a distributor or client can log into in a browser, our job is to connect to it, not rebuild it.

- Login sits top right and hands over to their application, either by opening it directly or by embedding it on a Moneybee branded page.
- Session, two factor and portfolio data all stay on their side, which keeps investor data off the marketing site entirely.
- What we need from them: the URL, whether it can be embedded, and whether they want single sign on or a plain hand off.
- **Cost: small.** A day of work, absorbed into the current fee.

Path B. It is an API with no front end.

If the platform exposes data and expects someone else to present it, we build the screens. This is more work, and it is also work we are good at and can scope precisely.

- We design and build the investor and distributor views: holdings, statements, factsheets, documents, whatever the endpoints return.
- The interface then belongs to Moneybee and matches the site, which is a better outcome than an embedded panel that looks like a different company.
- What we need from them: endpoint documentation, the authentication model, sample responses and who owns the data contract.
- **Cost: a separate quote,** driven by how many screens the endpoints imply. We cannot price it honestly before we have read them.

What to say in the meeting. Both paths are fine and neither is a problem.

Ask for a thirty minute call with whoever owns the platform, and bring back either a URL or a set of endpoints. That one call converts the biggest open item in the reply into a number.

The security answer

He asked directly, so this is written to be forwarded as it stands. The important idea is the split. A marketing site holding no investor data has a very small attack surface, and keeping it that way is a design decision as much as a security one.

10 What we deliver, and what stays with Moneybee

On our side, included

- **No plugin surface.** The site is built, not assembled, so the single largest attack vector in a WordPress installation does not exist here.
- **TLS everywhere,** HSTS, certificates issued and renewed automatically.
- **Firewall and denial of service protection at the edge,** in front of the application, before traffic reaches anything of ours.
- **Security headers,** being content security policy, frame options, referrer policy and permissions policy, set at the platform level.
- **Bot and spam protection on every form,** with rate limiting, so the careers form cannot flood the CRM.
- **Secrets held in the environment,** never in the code, and no credentials in the repository at any point.
- **Every deploy immutable and revertible.** Any version restores in under a minute.
- **Automated dependency scanning,** patched under the maintenance agreement.
- **No administrative login on the site itself.** Content editing runs through a hosted system with its own access control, so there is no admin page to attack.
- **Full ownership transfers** at handover: repository, domain, hosting and analytics.

On Moneybee's side

- **The AWS platform and everything in it.** Investor identity, portfolio data, two factor, session handling and audit logging belong to that system whichever path in section 09 we take.
- **WhatsApp.** Business API access, the approved provider relationship, message templates and the opt in record sit with the platform, not the website.
- **Regulatory obligations of the licensed entity.** SEBI cyber security and resilience requirements apply to Moneybee as a registered intermediary and reach further than a public website.
- **Personal data handling** under the Digital Personal Data Protection Act, covering consent, retention and breach notification. We build the consent capture and the privacy notice. The policy behind them is theirs.
- **Access discipline.** Who holds the CMS, CRM, domain and hosting logins, and what happens when one of them leaves.

The line worth repeating. Investor data never touches the marketing site. Forms collect a name, a contact and an enquiry, then hand off. Everything sensitive lives behind their login. That one decision removes most of what a site like this would otherwise defend, and it answers a question their compliance team will eventually ask.

What the number does now

His reply took two things out of the build and put five small things in. Those roughly cancel, which lets us hold the original fee and spend the goodwill on the three items that genuinely need their own number.

11 The fee, restated

Base build, unchanged	₹80,000. Everything in MB-01, reshaped around his corrections. Nothing about the reply justifies moving this figure in either direction.
Comes out of the base	The investment banking transaction history, which moves to moneybeeadvisors.com, and the published research section, which cannot exist without a research licence.
Goes in at no extra cost	The three site group switcher, the investor login link, the distributor page and enquiry form, the CRM connection for every form on the site, and factsheet upload and listing. These are absorbed, and it is worth him knowing they were absorbed.
Comes off the add on sheet	Editorial copywriting at ₹12,000, since he writes the site himself. We still supply the content structure and edit what arrives.
Stays parked	Portal styling at ₹6,000 and the AI research assistant at ₹6,000 plus usage, both marked decide later in his reply. Leave them on the sheet, unpriced work is harder to add back than to leave visible.
Needs its own quote	Careers module , after his walkthrough. Platform integration , only if section 09 turns out to be Path B. Logo redraw , only if no vector original exists. We quote none of these today and we should resist being pushed to.

The maintenance agreement

He asked what the AMC covers and said Moneybee would like to retain us. Arriving with it already defined is worth more than promising to send it afterwards.

12 The maintenance agreement he asked about

Included every month

- Hosting, domain and certificate management, with uptime monitoring and alerting.
- Security patching and dependency updates as they are released.
- Backups and one click rollback to any previous version.
- Three hours of content and layout changes, carried forward one month if unused.
- Monthly factsheet publishing, if they would rather we did it than do it themselves.
- Search Console and analytics monitoring, with a short quarterly note on what moved.
- Two working day response on anything broken, same day on anything down.

Not included

- New pages and new features, quoted separately as they come up.
- Anything inside the AWS platform or the WhatsApp integration.
- Written content, which stays with Shreyam.
- Paid search, advertising and social media management.

Proposed figure

₹5,000 per month, billed annually at ₹60,000, starting thirty days after handover so the revision window is not eaten by the retainer. A starting position. Confirm before the call.

Why define it now. A retainer that begins as a vague promise of support turns into unbilled work within two months. Listing three hours, naming the response times and putting the exclusions in writing protects the relationship more than it protects the invoice.

The date, reset

The 31 August target was set before the reply arrived and before the look and feel decision had an owner. Rather than pick another calendar date that depends on someone else's diary, the schedule below counts from the day Aditi signs off a direction. That makes the gate visible and puts the start date in their hands.

13 Eight weeks from sign off

What sits on the critical path. Two things. The direction sign off, which starts the clock, and the compliance review of the performance figures, which waits on section 05. Everything else has slack. Lock a direction this week and settle the performance basis inside a fortnight, and the site launches comfortably inside eight weeks, with the revision window outside that.

Owners, and what to say

Five names, five tasks, none of them large. Read this list aloud at the end of the meeting and put a date against every row before anyone leaves.

14 Four things only Moneybee can unblock

Aditi	Forty five minutes in front of the three directions, this week. Everything downstream waits on this one meeting.
Shreyam	The marketing deck for page 11. Material for the first three case studies. The careers walkthrough he offered. A decision on how his LinkedIn appears, if at all.
Pournima and Suprit	The fee table content and the compliance framing around it, plus answers to the four performance questions in section 05.
Suprit	Vector brand originals, or confirmation that none exist. The broking site URL for the group switcher.
Their AWS owner	Thirty minutes, to establish Path A or Path B. Named person and a date, in this meeting.

16 Three things worth saying out loud

- ✓ **He wrote the positioning for us, and it is good.** Lead with that. The smallcap edge, the India growth thesis and the seventeen year record are a stronger brief than anything we would have written from outside. Telling him so costs nothing and buys a lot.
- ✓ **Twelve of the eighteen points are already covered.** Three need a number and four are waiting on them. Framing it that way keeps the meeting out of a negotiation and turns it into a list of small tasks with names against them.
- ✓ **The site launches eight weeks after Aditi decides.** Not after the deck arrives, not after the AWS call. One decision starts the clock, and it belongs to one person who has not yet seen the work.

What not to do. Do not quote the careers module or the platform integration in this meeting, however much the conversation invites it. Both are cheap to underestimate and expensive to correct, and both become straightforward numbers after a thirty minute call. Saying we will price it properly once we have seen the endpoints reads as competence. Guessing does not.

Sixty minutes

The reply is long enough that a meeting without a shape spends an hour on the first four points and never reaches the platform question, which is the one that moves the number. This order front loads the decisions and leaves detail to the written reply.

15 The running order

5 min	Where this stands. The reply is a yes with conditions. Name the four outcomes today has to produce and put them on the wall.	Shared expectation
10 min	The three directions. Scroll all three. Agree which we recommend to Aditi and how the session with her is run.	A date with Aditi
15 min	The register, points 01 to 18. Work the table. Most are answered, so this is confirmation more than debate. Slow down only on the LinkedIn contradiction and the performance basis.	An agreed written reply
10 min	The platform question. Path A or Path B, and who at Moneybee can tell us which. Do not leave without a name and a slot.	A technical call booked
10 min	Money. The base fee holds. Three items get their own quote later. The maintenance agreement is defined and priced.	A position we both hold
10 min	Owners and dates. Read section 14 aloud, assign each line to a person, and set the new launch window off the sign off date.	The reset schedule
